1960s and later : The decades following the decline of the studio system in the 1960s saw changes in the production and style of film. Various New Wave movements including the French New Wave, Indian New Wave, Japanese New Wave, and New Hollywood and the rise of film-school-educated independent filmmakers contributed to the changes the medium experienced in the latter half of the 20th century. Digital technology has been the driving force for change throughout the 1990s and into the 2000s. Digital 3D projection largely replaced earlier problem-prone 3D film systems and has become popular in the early 2010s.citation needed

As a medium, film is not limited to motion pictures, since the technology developed as the basis for photography. It can be used to present a progressive sequence of still images in the form of a slideshow. Film has also been incorporated into multimedia presentations and often has importance as primary historical documentation. However, historic films have problems in terms of preservation and storage, and the motion picture industry is exploring many alternatives. Most films on cellulose nitrate base have been copied onto modern safety films. Some studios save color films through the use of separation masters: three B&W negatives each exposed through red, green, or blue filters essentially a reverse of the Technicolor process. Digital methods have also been used to restore films, although their continued obsolescence cycle makes them as of 2006 a poor choice for long-term preservation. Film preservation of decaying film stock is a matter of concern to both film historians and archivists and to companies interested in preserving their existing products in order to make them available to future generations and thereby increase revenue. Preservation is generally a higher concern for nitrate and single-strip color films, due to their high decay rates black-and-white films on safety bases and color films preserved on Technicolor imbibition prints tend to keep up much better, assuming proper handling and storage.

Streaming services The BBC noted that the popularity of streaming services could increase, especially if more people are isolated at home,85 with The Guardian suggesting that non-blockbuster films may be sent to streaming more quickly than anticipated after release, to catch this market.7 One popular film to stream was 2011s Contagion, which moved up from being the 270th most-Watch ed Warner Bros. film in December 2019 to become its 2nd most-Watch ed film in 2020 by March7218 and entered the top 10 on iTunes film rentals,219 ostensibly due to the similarities its story bears to the outbreak.7218219 The stock of increased in 2020 by March 12. The platform had released its original docuseries Pandemic: How to Prevent an Outbreak at the end of January 2020.81 Disney+ went live in India on March 11 via its domestic service Hotstar, eighteen days before it was set to, though Disneys shares had fallen by 23% on March 9.81
